Hiring Manager
Digital, AI and Innovation Hub
Bureau for Policy and Programme Support (BPPS)
United Nations Development Programme (UNDP)

Re: Application for Digital, AI and Innovation Internship (Job ID: 33001)

Dear Hiring Manager,

I am applying for the Digital, AI and Innovation Internship because it aligns with the direction I have been working toward, building practical AI systems and applying them to real world challenges, particularly in areas related to digital inclusion and data driven decision making. I am currently in the final year of my Bachelor of Information Management at Tribhuvan University, and I have focused on developing end to end AI solutions that go beyond experimentation into usable systems.

The project I am most proud of is an AI powered README generator that analyzes GitHub repositories and produces structured documentation using Flan T5 and Mistral via LangChain. I designed and implemented the full pipeline, including retrieval augmented generation workflows, prompt engineering, and deployment through an asynchronous FastAPI backend with Docker. This experience pushed me to focus not just on model performance, but also on reliability and usability. In addition, I have developed a fraud detection API using Scikit learn, an NLP based resume parser using spaCy, and regression models for predictive analysis. These projects strengthened my ability to translate technical systems into tools that support decision making and operational efficiency.

Growing up in Kathmandu, I have seen how gaps in digital infrastructure and data systems affect access to services. This has shaped my interest in contributing to work that improves systems at scale. I am particularly interested in how AI systems connect with data governance, transparency, and public trust in development contexts.

Beyond technical skills, I bring strong documentation practices, the ability to work independently in remote environments, and a willingness to adapt quickly in collaborative settings. I am motivated to contribute to initiatives that combine technology, policy, and innovation to improve real world outcomes.

Thank you for your time and consideration. I would value the opportunity to contribute to and learn from this programme.

Sincerely,
Bikee Prajapati
